Key Concepts and Their Solutions in Chapter 19

Classification of Investments

One of the first steps in accounting for investments is correctly classifying them into three categories:

1. **Trading Securities:** Bought with the intent to sell in the short term for profit. They are reported at fair value, with unrealized gains and losses included in earnings.
2. **Available-for-Sale Securities:** Not classified as trading or held-to-maturity. Reported at fair value, but unrealized gains and losses are reported in other comprehensive income until realized.
3. **Held-to-Maturity Securities:** Debt securities the company intends and is able to hold until maturity. Reported at amortized cost, not fair value.

Solution Tip: When solving problems, carefully determine the classification based on management's intent and the nature of the investment, as this affects subsequent measurement and reporting.

Initial Recognition and Measurement

Investments are initially recorded at their purchase cost, which includes: - The purchase price - Any directly attributable transaction costs
Solution Approach: - Debit the appropriate investment account (e.g., Investment in Trading Securities) - Credit cash or other consideration given
Example: A company purchases 1,000 shares of stock at \$50 per share, paying \$2,000 in transaction costs. Entry: Debit Investment in Trading Securities \$52,000 Credit Cash \$52,000

Subsequent Measurement and Fair Value Adjustments

Post-initial recognition, investments are measured based on their classification: - Trading Securities: Record at fair value; unrealized gains/losses go through net income. - Available-for-Sale Securities: Fair value adjustments are made, but unrealized gains/losses are recorded in other comprehensive income. - Held-to-Maturity Securities: Amortized cost is used, and fair value fluctuations are generally not recognized unless impairment occurs.
Solution Strategy: - Regularly update the fair value of securities. - Adjust the carrying amount accordingly. - Recognize unrealized gains/losses in the correct financial statement component.

Income Recognition from Investments

Income from investments includes: - Interest revenue for debt securities, recognized using the effective interest method. - Dividends from equity securities, recognized when declared.
Solution Tips: - Calculate interest income using the effective interest rate. - Record dividends when declared, not necessarily when received.

Common Problems and Solutions in Chapter 19

Problem: Recording Purchase of Securities

Scenario: A company buys \$100,000 worth of available-for-sale bonds, paying \$1,000 in transaction costs. Solution: - Debit Investment in Available-for-Sale Securities \$101,000 - Credit Cash \$101,000

Problem: Fair Value Adjustment for Trading Securities

Scenario: Market value of trading securities increases by \$5,000. Solution: - Debit Investment in Trading Securities \$5,000 - Credit Unrealized Gain on Trading Securities (income statement) \$5,000

Problem: Recognizing Dividends and Interest

Scenario: A company receives \$2,000 in dividends and \$1,500 in interest during the period. Solution: - Debit Cash \$3,500 - Credit Dividend Revenue \$2,000 - Credit Interest Revenue \$1,500
