Exploring Reflection and Total Internal Reflection

- Experiment with incident angles greater than the critical angle. - Observe phenomena like total internal reflection. - Consult the answer key for explanations of these phenomena.

Common Questions and How the Answer Key Addresses Them

1. Why does light bend when passing through different mediums?

Answer: Light bends due to a change in its speed as it moves between materials with different optical densities. The change in speed causes the light to change direction, a phenomenon known as refraction.

2. How is the angle of refraction related to the incident angle?

Answer: The relationship is governed by Snell's Law. The angle of refraction depends on the incident angle and the refractive indices of the involved media.

3. What causes total internal reflection?

Answer: Total internal reflection occurs when light attempts to pass from a denser to a less dense medium at an angle greater than the critical angle, causing all the light to reflect back into the denser medium.
