2. Prioritize agricultural byproducts as raw materials.
3. Reduce dependence on non-renewable resources to enhance sustainability.

8. Reduce Derivatives

Minimizing Use of Temporary Modifications

Many chemical processes involve the creation of derivatives—protective groups or temporary modifications—that generate extra waste.

1. Avoid unnecessary derivatization steps.
2. Design reactions that do not require blocking groups or protecting groups.
3. Streamline synthesis pathways to be more direct.

9. Catalysis

Using Catalysts to Improve Efficiency

Catalysts enable reactions to proceed more efficiently, often under milder conditions, reducing waste and energy consumption.

1. Employ recyclable catalysts to minimize waste.
2. Choose heterogeneous catalysts for easier separation and reuse.
3. Develop new catalytic methods that are more selective and environmentally friendly.
